

TITLE

Django To-Do List Application

Mini Project Report

Name: E. Manasa, J. Gopi Sree, P. Kavya

Course: CRT Training

**College: Annamacharya Institute of
Technology and Sciences, Tirupati**

Date: 25-06-2026

INTRODUCTION

This project is a simple Django-based To-Do List web application. It helps users to manage daily tasks by adding, editing, viewing, and deleting tasks. The project is built using Python Django framework and SQLite database.

A screenshot of a web browser's address bar. It features standard navigation icons: a back arrow, a forward arrow, and a circular refresh icon. To the right of these icons is an information icon (a lowercase 'i' inside a circle) followed by the text '127.0.0.1:8000'. The entire address bar has a light gray background.

Tasks:

My First Task

Figure:1 Home Page (Task List View)

OBJECTIVE

The main objective of this project is to develop simple task management system that demonstrates CRUD (Create, Read, Update, Delete) operations using Django.

- My First Task [Edit](#) [Delete](#)
- Buy groceries [Edit](#) [Delete](#)
- Learn Python [Edit](#) [Delete](#)
- Build a Django app [Edit](#) [Delete](#)
- Study Django [Edit](#) [Delete](#)
- Learn Django [Edit](#) [Delete](#)
- Complete Django Project [Edit](#) [Delete](#)
- Learn Django Models [Edit](#) [Delete](#)

Figure 2: Add Task Functionality

TECHNOLOGIES USED

- **Frontend:** HTML, CSS
- **Backend:** Python (Django)
- **Database:** SQLite
- **Tools:** VS Code, GitHub

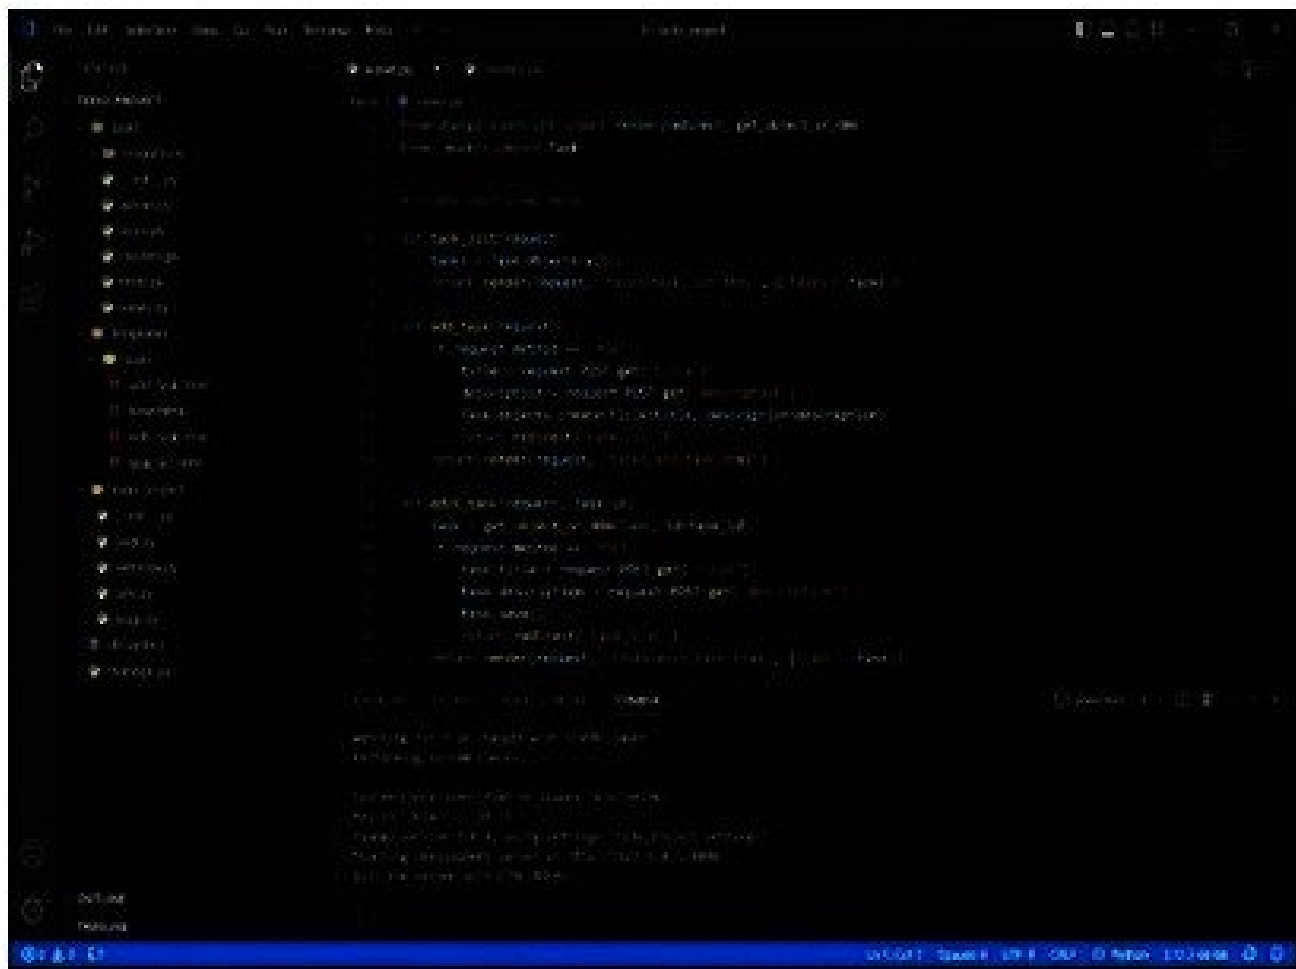

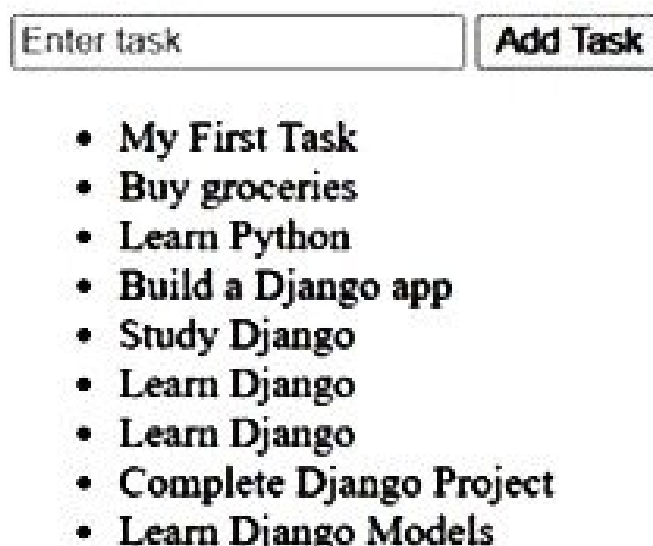

Figure 3: Django Project Development Environment

Modules / Features

- Add new tasks
- View task list
- Edit existing tasks
- Delete tasks
- Django Admin panel for managing data

My Tasks

Enter task

- My First Task
- Buy groceries
- Learn Python
- Build a Django app
- Study Django
- Learn Django
- Learn Django
- Complete Django Project
- Learn Django Models

Figure 4: Django Admin Panel for Managing Tasks

METHODOLOGY (HOW IT WORKS)

1. User opens the application.
2. User adds a task using the input form.
3. Tasks are stored in SQLite database.
4. User can edit or delete tasks anytime.
5. Django admin panel allows backend management.

Figure 5: Django To-Do List Application – Task Management Page

RESULT

The Django To-Do List Application was successfully developed and tested. The application performs CRUD (Create, Read, Update, Delete) operations effectively. Users can easily add, view, edit, and delete tasks through a simple and user-friendly web interface.

Figure 6: Tasks Successfully Stored and Managed in Django Admin

CONCLUSION

- The Django To-Do List Application successfully demonstrates web application development using the Django framework.
- The project helps in understanding CRUD (Create, Read, Update, Delete) operations, database management, and backend development.
- It provides a simple and efficient solution for managing daily tasks.
